

DIPPING RESIN

APPLICATION STEPS

Nail preparation

1. Wash hands and nails with water and soap;
2. Push back the cuticles and file the nails;
3. Buff gently the nails and remove dust;
4. Apply 2 coats of pH Control.

Procedures

1. Apply **Medium Dipping Resin** making sure not to touch the skin;
 2. Dip or sprinkle powder and clean around the nail with an orangewood cuticle pusher;
 3. Seal powder with **Thin Dipping Resin** or with **Ultra-Thin Dipping Resin** in a tapping movement;
 4. Repeat steps 2 and 3 to obtain desired opacity and thickness;
- * **At this step, you can create a "bead" by soaking your brush into the powder. Make sure to carefully wipe your brush before putting it back in the bottle to avoid contamination.**
5. Harden the resin using spray activator (spray 8 to 10 inches away from the nails to avoid white spots);
 6. File the nails to obtain a smooth surface and remove dust;
 7. End with the top coat of your choice.
